1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art to US 5,385,846 (Kuhn et al.) discloses a biosensor comprising a base layer (2); a cover layer (3) with a mesh layer (10) adhered thereto; a flow channel having walls formed by the cover layer and the base layer; a sample application zone (7); and at least one opening communicating with the flow channel to allow gas to be vented from the flow channel. The prior art fails to provide a spacer layer and mesh that is not contacting the reactor site. The mesh in the reference to Kuhn et al. is contacting a mesh layer containing a reagent that is used with the electrodes of the biosensor to generate a current level correlated to hematocrit level.
